

K2C1 Model Introduction: K2C1 is the basic model of the K TWO round knife thinning machine series, mainly used for edge thinning operations of various materials such as genuine leather, synthetic microfiber, etc. The maximum thinning width can reach 50 millimeters. Various accessories can be configured.

Model Features:

- Adopting a bottom mounted motor drive, it is flexible and versatile, and various types of motors can be selected according to needs.
- Optional with fixed speed motor function, no need for foot pedal, can operate on its own, reducing work intensity.
- We can customize different types of solid wood countertops according to our needs, and also support DIY modifications.
- Optional vacuum function can effectively remove waste and dust, prevent material jamming, and ensure a clean usage environment.
- The whole machine parts adopt high-precision machining technology, which is durable and has low noise.
- Compatible with various special presser feet and modified accessories of K TWO, it can produce different edge thinning effects.

Technical Parameters:

Model	K2C1
Machine Weight	65KG
Dimensions	70*50*123(cm)
Minimum Thinning Thickness	0.05mm
Voltage	220V
Power	根据需求选择
Drive Form	下挂式
Maximum Thinning Width	50mm

Optional Configuration:

- Various special presser feet
- Feeding slide table
